Chitkara University, Punjab

In today's fast-paced digital environment, effective complaint management plays an important role in maintaining transparency, accountability, and user satisfaction within organizations and institutions. Traditional complaint handling methods often rely on manual processes, physical records, and delayed communication, making the overall system inefficient and difficult to manage.

To address these challenges, JANSETU has been developed as a centralized complaint management platform that simplifies the process of complaint registration, monitoring, and resolution. The system enables users to submit complaints conveniently, track their progress, and receive timely updates, while administrators can efficiently manage and respond to complaints through a structured workflow.

Many organizations still depend on conventional complaint management approaches that lack efficiency, transparency, and proper tracking mechanisms. These systems often create communication gaps between users and administrators, resulting in delays and dissatisfaction.

Major Problems Identified

- Manual handling of complaints increases processing time
- Difficulty in maintaining and managing records
- Lack of transparency in complaint resolution
- No proper mechanism for tracking complaint status
- Delayed communication between users and administrators

These limitations highlight the need for a smart and automated complaint management solution capable of improving operational efficiency and user experience.

Objectives

The primary objective of JANSETU is to provide a reliable and efficient digital platform for complaint management that enhances transparency, accessibility, and administrative control.

Key Objectives

- To develop a centralized system for complaint registration and management
- To provide users with a simple and user-friendly complaint submission process
- To enable real-time tracking and status monitoring of complaints
- To reduce manual paperwork and administrative workload
- To improve transparency and communication during complaint resolution
- To improve overall response time and service quality

Key Features

1. Complaint Registration

JANSETU provides a simple and user-friendly platform where users can register complaints digitally by entering relevant details. The system also supports voice-based  input functionality, making complaint submission more accessible and convenient for users.

2. Real-Time Complaint Tracking

Users can monitor the progress and current status of their complaints at every stage, ensuring transparency and improved communication throughout the resolution process.

3. Priority-Based Complaint Handling

The system classifies complaints according to their urgency and importance, enabling administrators to identify critical issues quickly and ensure faster resolution.

4. Administrative Management System

Administrators can efficiently manage complaints, review submitted issues, update statuses, and maintain smooth workflow coordination through a centralized management interface.

5. Status Update and Resolution

The platform provides continuous status updates during the complaint resolution process, helping users stay informed about ongoing actions and final outcomes.

JS-2839	Kashish	08847250328	Crime	Police	4/26/2026, 5:52:42 PM

Jansetu uses an intelligent priority-based sorting mechanism to ensure faster handling of critical issues.

-  **High Priority** → Safety risks, emergency issues, urgent public concerns
-  **Medium Priority** → Infrastructure problems, service delays, repeated complaints
-  **Low Priority** → General feedback, minor issues, non-urgent requests

How it works:

- Complaint category is analyzed at submission
- System assigns priority automatically
- Admin dashboard highlights high-priority cases first
- Ensures faster response for critical situations

Impact:

- Faster decision-making for admins
- Reduced delay in urgent complaints
- Fair and structured complaint handling system

System Architecture

1. User Registration/Login

Users access the platform through secure login or registration.

A screenshot of a web form titled "Welcome to JanSetu" with a close button (X) in the top right corner. The form contains two options: "New User?" with a blue "Signup" button, and "Already a User?" with a white "Login" button.

2. Complaint Submission

Users submit complaints using text or voice-based input along with necessary details.

3. Complaint Processing

The system validates the complaint and assigns an appropriate priority level.

4. Administrative Review

Administrators review the complaint and take necessary action for resolution.

5. Status Update

Complaint status is updated regularly to keep users informed about progress.

6. Complaint Resolution

After successful action and verification, the complaint is marked as resolved. Administrators review the complaint and take necessary action for resolution.

Complaint Details

Complaint No: JS-2230

Name: Taney

Phone: 9877422433

Address: guru nanak nagar

Category: Roads

Department: Municipal Department

Description:

accident prone hole in roads

Translated:

accident prone hole in roads

Priority: 2 (Low)

Status: Pending

Complaint Filing Date and Time : 5/1/2026, 9:42:01 AM

Tools and Technologies

Frontend Development: React.js, HTML, CSS, JavaScript, Tailwind CSS

Used for designing responsive, interactive, and user-friendly interfaces.

Backend Development: Node.js, Express.js

Used for handling server-side operations and complaint processing functionalities.

Database Management: MySQL

Used for storing and managing complaint records and user information securely.

Authentication & Security: JWT Authentication

Used for secure login, user verification, and protected system access.

Development Tools: VS Code, Postman, GitHub

Used for coding, API testing, debugging, and version control.

Modern web technologies were integrated to ensure scalability, security, responsiveness, and efficient complaint management.

Conclusion

- Jansetu provides an efficient digital platform for complaint registration and management
- The system improves communication between users and administrators
- It ensures transparency in complaint tracking and status updates
- Manual effort is reduced through centralized and automated handling of complaints
- Overall, the system enhances speed, organization, and reliability in grievance redressal

Future Scope

- ❖ Development of a mobile application for improved accessibility
- ❖ Integration of AI-based complaint categorization for automated
- ❖ Implementation of WhatsApp/SMS notifications for status update
- ❖ Addition of an advanced analytics dashboard to track complaint trend
- ❖ Integration with government portals for wider outreach
- ❖ Multilingual support to enable complaint submission in multiple languages
- ❖ AI chatbot assistant to guide users in filing and tracking complaints
